

# Turning Supplier Risk Issues into Opportunities

**“How fast can we do supplier risk assessments? Not nearly fast enough.”**

Without targeted insights to speed the process, supplier assessments take months, rather than weeks.

**Focused intelligence makes everyone look smart.**

With embedded intelligence and context, you can quickly assess all supplier risk and fast-track the right action.

**“Scoring 38,137 suppliers manually is beyond unmanageable. I can barely do my top 100.”**

Scoring only the top few suppliers makes supplier segmentation hard and misses critical signals.

**Score all your suppliers, every single one of them.**

With automatically generated risk scores and better segmentation, it's easy to spot developing trends across more suppliers.

**“This mountain of supplier information is burying what really matters.”**

There's no shortage of risk information. But how do you find what's truly relevant?

**Have 500,000 eyes looking at the right things.**

Receiving alerts relevant to your suppliers helps you avoid costly business disruptions.

**“If everyone has a different version of the truth, which one is true?”**

Without a unified supplier record, it's only a matter of time until someone engages an at-risk vendor.

**Demand the sanctity of your supplier record.**

Having one place to get supplier information enables everyone to avoid risky decisions.

**“I believe in our corporate values. I'm just not sure our 35,000 suppliers feel the same way.”**

Your corporate policies need to extend to your suppliers or it could be damaging to your brand and business.

**An ethical supply chain is no longer an oxymoron.**

Source responsibly when you evaluate, select and monitor suppliers.
