

SAP Process Mining by Celonis, Cloud Edition

Solution Objective

SAP Process Mining by Celonis, cloud edition helps businesses create more intelligent processes. Data-based process discovery, visual representations, and extensive drill-down capabilities allow new levels of insight so you can discover and prioritize process improvement and transform processes with AI-based actions inserted into your process.

How does it work?

STEP 1

CONNECT - EXTRACT DATA FROM PROCUREMENT SYSTEMS.

STEP 2

RECONSTRUCT AND VISUALIZE PROCESSES.

STEP 3

FIND ROOT CAUSES OF PROCESS ISSUES WITH HELP OF AI.

STEP 4

TRANSFORM EXISTING PROCESSES: MAKE THEM INTELLIGENT.

Enhance Procurement Productivity:

- Identify and reduce manual changes – rework
- Eliminate unnecessary workflows and streamline approvals
- Increase two- and three-way matches

Increase Speed and Agility:

- Identify bottlenecks and long runners
- Reduce cycle times
- Reduce process complexity

Improve Quality & Reliability:

- Avoid unnecessary order rejections and cancellations
- Understand and tackle availability problems
- Improve accuracy and completeness of shipments

Ensure Compliance:

- Full population testing leaves no stone unturned
- Continuous auditing instead of sampling
- Alert for non-compliant patterns and early intervention

Reduce Corporate Spend:

- Identify reasons for lost discounts and act on them
- Quantify savings potential and prioritize efforts for supplier consolidation
- Always select most efficient buying channel

Proactively Manage Vendors:

- Monitor vendor service level agreements (SLAs)
- Ensure contract usage
- Leverage data in price negotiations
- Optimize material lead times

Optimize Working Capital:

- Negotiate favorable payment terms
- Improve Days Payable Outstanding (DPO)
- Bring down inventory costs
- Consistently pay on-time

Improve Risk Management:

- Identify sources of maverick buying
- Monitor segregation of duties
- Monitor overall supply chain
